

## **Insect Body Song:**

*Sung to the tune of "Head, Shoulders, Knees, and Toes"*

*\*Show children a diagram of what an insect body looks like and label the parts with them- then sing with the actions of touching your own head, thorax (chest), abdomen (hips), & six fingers pointed outward like legs as each body part is sung.*

Head, thorax, abdomen, six legs

Head, thorax, abdomen, six legs

Head, thorax, abdomen, six legs

Eyes, a mouth, and antennae too

Head, thorax, abdomen, six legs

---

## **Insect Movement Song:**

by Sandy Dixon

*Sung to a unique tune- fast almost rap-like with inflections on the movements*

*\*Discuss ahead of time- how do bugs move? Then have the children think of examples of bugs that jump, fly and creep  
As you sing the song, let the children act out the bugs movements.*

Jump, fly, creep down low,

insects always on the go

Finding food and shelter too,

insects move it-just like you!
